## BUCHANAN COMPUTING

AccsMap Courses

Essentials

Gain the necessary skills to: navigate your way around AccsMap, colour-code and find details or Road Traffic Collisions and generate reports. This essential system overview will allow you to use AccsMap efficiently and answer common Freedom of Information requests and other road accident related enquiries. A walk through the STATS19 form is also offered for people newly involved with road accident data.

Module 1   *Half day training from £650*

Standard Analysis

Run a wide range of queries in order to extract pertinent road traffic accident information and generate related tabulation and stick reports. The course covers advanced analytical features such as the cluster or monitoring sites analysis and map production tools. Module 1 is a prerequisite for this course.

Module 2   *Half day training from £650*
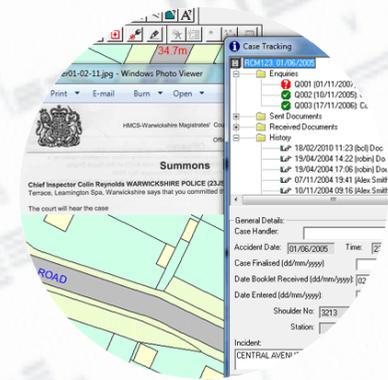

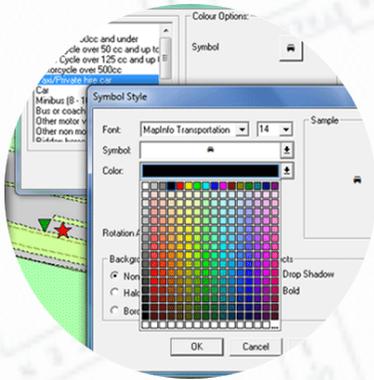

Advanced Analysis

A comprehensive insight into the AccsMap database structure and an introduction to SQL querying in order to give system analysts the necessary expertise to answer any RTC related questions accurately. The course will also focus on advanced tabulation reports, route analysis and First Year Return on Investment for your monitoring sites. Safety camera site justification may also be covered for camera site users. Modules 1 and 2 are normally a prerequisite for this course.

Module 3   *Day training from £1,150*

All the course fees allow for up to 5 attendees. Courses at your office exclude trainer's expenses: standard return rail fare from our offices and £110 when an overnight stay occurs.

50% discount will apply if 2 half days training are ordered for the same day.

Administration & Maintenance

Advanced features for system supervisors such as password management, updating OS MasterMap and gazetteers and other admin tasks. Focus will be given to: archiving data, customising the accident display, setting up new colour-codes and reformatting the system accident data forms.

Module 4   *Half day training from £650*

Collision Recording & Validation

Course designed for people entering new Road Traffic Collisions into the system database. You will be taken through the different steps needed to add a new road accident, validate the data entered (STATS21), upload the accident into the main database and finally export accidents into various formats (DfT format, CSV etc). Module 1 is a pre-requisite for this course.

Module 5   *Half day training from £750*

Case Handling

Learn how to configure and use the AccsMap Case Tracking Module. It involves creating and entering Road Traffic Collisions case data and dealing with retention of personal information. Enabling you to maintain a list of contacts linked to your road accident, schedule specific tasks and generate standard correspondence from your templates to all relevant parties including insurance companies, courts and vehicle drivers.

Module 6   *Half day training from £750*

All the course fees allow for up to 5 attendees. Courses at your office exclude trainer's expenses: standard return rail fare from our offices and £110 when an overnight stay occurs.

50% discount will apply if 2 half days training are ordered for the same day.
